## FAULT TOLERANT COMPUTING NODE HAVING MULTIPLE HOST CHANNEL ADAPTERS

## ABSTRACT OF THE DISCLOSURE

A computing node configured for communications on an InfiniBand<sup>TM</sup> network includes at least two host channel adapters configured for communications on the InfiniBand<sup>TM</sup> network, and at least one processor configured for controlling the communications of the two host channel adapters on the InfiniBand<sup>TM</sup> network. The host channel adapters communicate with the processor via an internal bus. The processor monitors communication operations by the host channel adapters on the InfiniBand<sup>TM</sup> network. If the processor detects that one of the host channel adapters is unable to complete the corresponding communication operations, the processor outputs a message requesting traffic destined to the one host channel adapter to be redirected to the remaining host channel adapter.
